

Contract Modeling

The Contract Modeling page allows you to access the various programs that you will use to build fee schedules, select modeling criteria and view models. NHXS preloads payor specific pricing rules with minimal input required from the user. NHXS maintains and updates millions of payor specific pricing rules and clinical edits.

Flexible model criteria allows you to compare two different fee schedules for the same payor or two different payors with the same fee schedule. You can use any payor's claims from history in your model as well.
